To Whom It May Concern:

I confidently recommend The Center for Election Science for the outstanding work they did consulting on the process and tabulation algorithm we used to select our Webby nominees and winners annually.

Hailed as “The Internet’s highest honor,” by *The New York Times*, The Webby Awards is the leading international award honoring excellence on the Internet. Our judging process is integral to honoring the best of the Internet each year.

Among The Center for Election Science’s contributions to improving our judging process was the unique queuing algorithm they developed to more efficiently focus judge’s time and energy on candidates that most needed attention. The algorithm, which they helped our programming team implement, prioritized which candidates would get evaluated next to focus votes on entries with the highest degree of uncertainty.

Additionally, they recommended a more intuitive and streamlined voting method that performed beyond our expectations—another example of their knack for solving complex problems with intuitive remedies.

If you're doing anything election related, there is no team better than The Center for Election Science.

Sincerely,

David-Michel Davies
Executive Director, Int'l Academy of Digital Arts & Sciences
President, The Webby Awards
